

# IT'S TIME TO FOLLOW THE SCIENCE

A Pocket Guide for Defenders of Truth on **COVID Vaccines**

## The pharmaceutical industry shows us time and time again that they can't be trusted.

- Pfizer, FDA, and CDC have **deliberately hidden COVID vaccine data**. A U.S. District Judge ordered Pfizer to release the data submitted to FDA from its clinical trials in support of a COVID-19 vaccine license. Before the ruling, **FDA planned to suppress the data for the next 75 years**, which the agency claimed was necessary, in part, because of its "limited resources."
- Once Pfizer's clinical trials were unblinded, participants who received the placebo were given the opportunity to receive the vaccine in December of 2020, and the majority of participants took it. **This eliminated the control group and nullified any long-term studies for safety and efficacy.**
- Once the COVID-19 vaccines get full approval and CDC's ACIP committee officially adds them to the childhood schedule, **this will grant Pfizer permanent immunity from liability and pave the way for mandates for school** – the perfect business model – the commoditization of our children!

## Children have virtually zero risk of serious complications from COVID, and a large body of medical literature indicates that almost zero healthy children are dying from it.

- A large study on *medRxiv* conducted in Germany showed **zero deaths for children ages 5-11** and a case fatality rate of **three per million** in all children without comorbidities.

Office for National Statistics

COVID-19 deaths and autopsies  
Feb 2020 to Dec 2021

- Data from England and Wales, published by the UK Office of National Statistics on January 17, 2022, revealed that throughout 2020 and 2021, **only one child under the age of five**, without comorbidities, had died from COVID in the **two countries, whose total population is 60 million.**

# Studies show lack of efficacy in the COVID vaccine:

- A recent study in *medRxiv* showed the effectiveness of Pfizer's COVID vaccine in 5- to 11-year-olds was **only 12% after seven-weeks of observation.**

New York State Department of Health, Albany, New York  
University at Albany School of Public Health, State University of New York, Rensselaer, New York  
**Effectiveness of the BNT162b2 vaccine among children 5-11 and 12-17 years in New York after the Emergence of the Omicron Variant**

**COVID-19 surveillance reports**

COVID-19 surveillance reporting has changed.  
From March 2022, a new succinct weekly overview report will be released each week to present key COVID-19 surveillance data.

**Latest weekly overview report**  
Summary of epidemiological week 10 ending 12 March 2022

• Hospital and intensive care unit (ICU) admissions in people with COVID-19 have plateaued in the last week with COVID-19 deaths.

- The government of New South Wales, Australia, publishes a weekly Covid-19 Surveillance Report that recently showed that **4 in every 5 deaths from COVID-19 were in the vaccinated.**

- Recent data from the UK Health Security Agency confirms **deaths are rising dramatically among the triple vaccinated** population while declining steadily among the unvaccinated population in England. Recent figures showed the fully vaccinated accounted for 9 in every 10 COVID-19 deaths over the past month, and the triple vaccinated accounted for 4 in every 5 COVID deaths.

## The risks outweigh the benefits of COVID vaccination in children:

**Myocarditis Outcomes Following mRNA COVID-19 Vaccination**

Preliminary Data: data are subject to change

Vaccine Safety Team  
CDC COVID-19 Vaccine Task Force

[cdc.gov/coronavirus](https://cdc.gov/coronavirus)

- While **the CDC says myocarditis is a mild disease, cardiologists know otherwise.** CDC's preliminary data, revealed that **nearly half of the young people diagnosed with myocarditis still had symptoms three months later,** and 39% had activity restricted by their physician. We know this serious adverse event frequently occurs in teens. However, no one knows how often it occurs in younger children. This is of major concern for babies and younger children.

- A study published in *Clinical Infectious Diseases* out of Hong Kong showed **1 out of every 2,700 12- to 17-year-old boys** are being **diagnosed with myocarditis** following the 2nd dose of Comirnaty vaccine, or 37 per 100,000 vaccinated.

**Risk of Myopericarditis following COVID-19 mRNA vaccination in a Large Integrated Health System: A Comparison of Completeness and Timeliness of Two Methods**

Katie A Sharff, David M Dancow, Jodi L Longueil, Eric S Johnson, Paul F Lewis

- A study from Kaiser posted on *medRxiv* found the **same rate of myocarditis** in 12- to 17-year-old American boys, **1 in 2,700.**

**Recent VAERS data shows that there were 27,968 deaths and 1,261,147 total adverse events which includes 228,477 serious injuries reported after COVID vaccines between 12.14.20 and 5.6.22.**

U.S. VAERS data from Dec. 14, 2020, to March 18, 2022, for 5 to 11-year-olds show:

- **9,771 adverse events**, including **234 rated as serious** and **5 reported deaths.**

U.S. VAERS data from Dec. 14, 2020, to March 18, 2022, for 12 to 17-year-olds show:

- **30,771 adverse events**, including **1,771 rated as serious** and **43 reported deaths.**
