

C19 Only and 0-17yrs olds

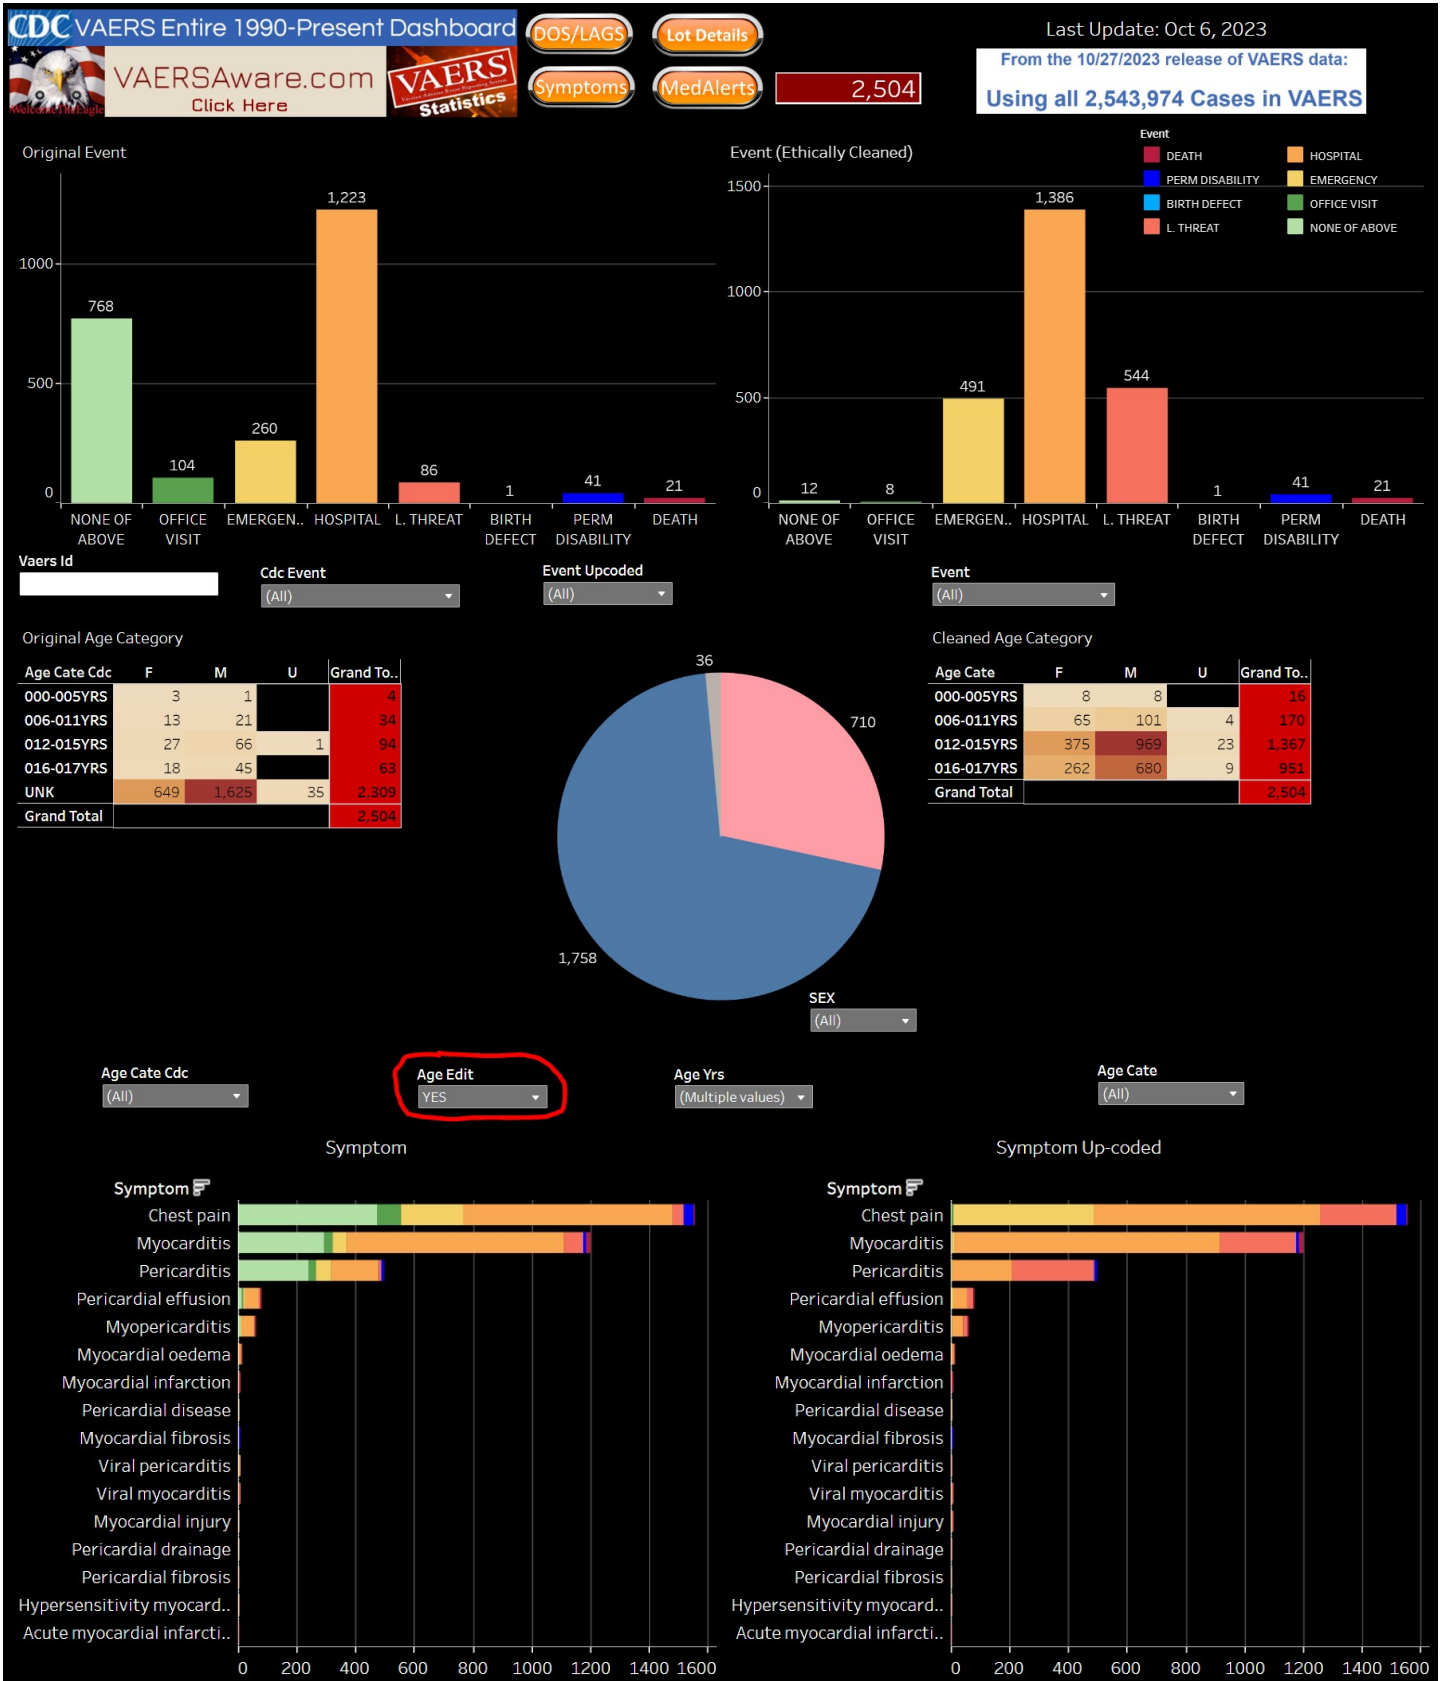

“Carditis” & chest pain

C19 Only and 0-17yrs olds

(previous unk age, but properly documented in write-up)

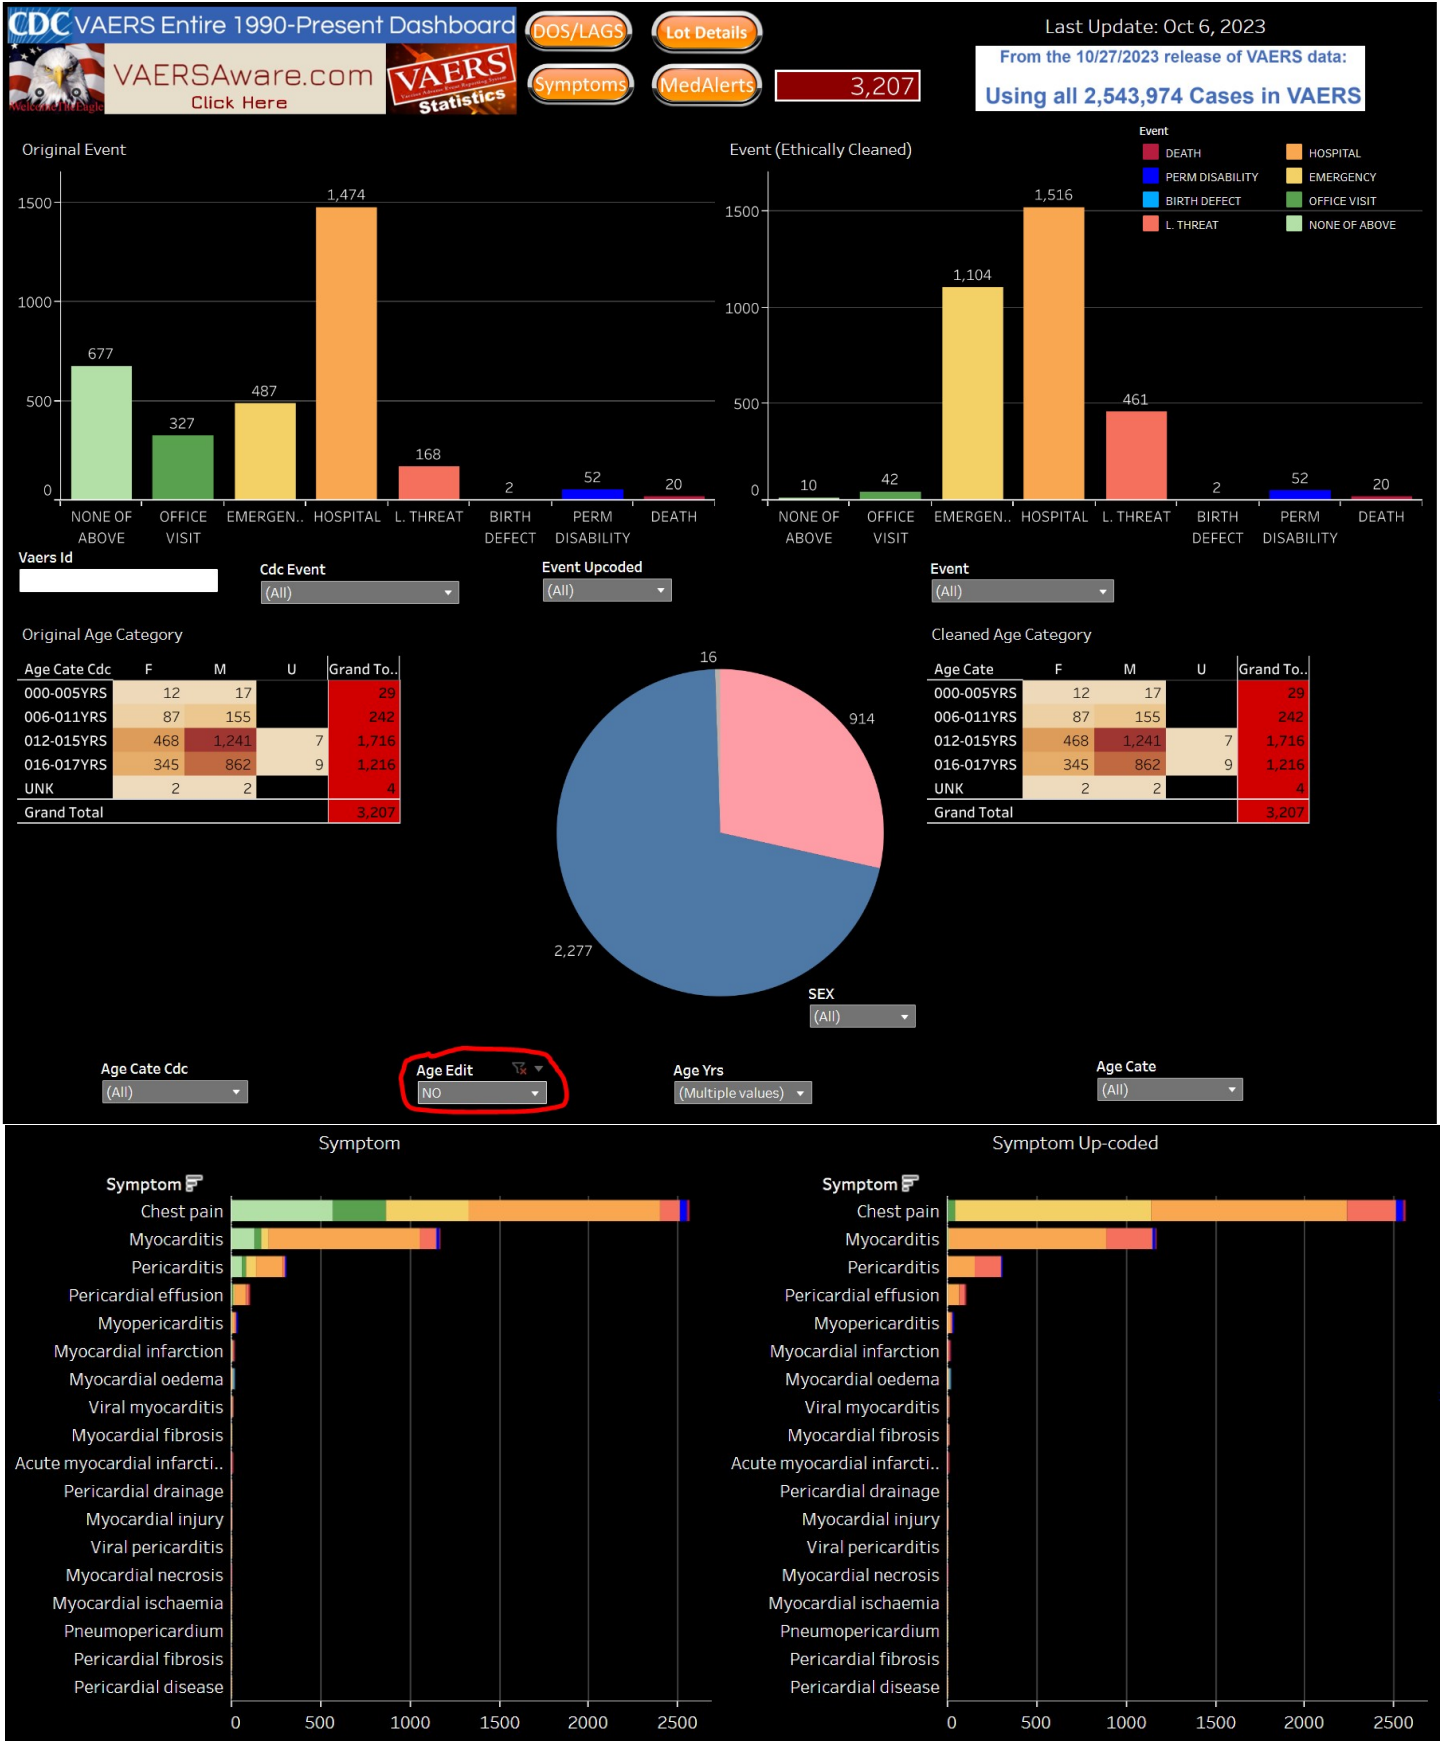

“Carditis” & chest pain

C19 Only and 0-17yrs olds

(previous unk age, but properly documented in write-up)

“Carditis” & chest pain

Summary:

About 43.8% (2504/5711) of all kids with myo/pericarditis & chest pain are hidden away in UNKNOWN age bucket.

There are currently 82,571 child reports (0-17yrs) with the help of identifying 18,515 UNKNOWN age kids. (22.4%)

This crude but very accurate observation indicates that a very high amount of UNK age kids with properly documented summary narratives, also has disproportionately high amount of heart problems!
