

You have no business telling anyone to vaccinate unless you can answer these questions **CORRECTLY**.

- 1.** Name 5 vaccine ingredients.
- 2.** Name 5 possible adverse reactions.
- 3.** Are the doctors or vaccine manufacturers able to be held liable if you or your child does suffer an adverse reaction to a vaccine?
- 4.** How many doses are currently administered to children from birth to age 18?
- 5.** Is it true that you have to be vaccinated in order to attend public school?
- 6.** What is the name of the reporting system for the vaccine injured?
- 7.** How much has currently been paid to vaccine injured families and who pays them?
- 8.** Which vaccines shed, for how long and what exactly does shedding mean?
- 9.** Is there still mercury in vaccines?
- 10.** Do they offer single doses of measles, mumps, rubella, tetanus, pertussis, or diphtheria?
- 11.** Have there ever been any studies on the safety or effectiveness of cocktail vaccines or the current vaccine schedule?

Give me one other interesting fact that was not already asked or discussed.
