Special Master
In the United States Court of Federal Claims

Re: Ines Chicos on behalf of LC

Honorable Special Master:

Please accept my daughter case for trial to determine the seizure's causality related to vaccination. We were devastated that a healthy child got severe eczema after 2 month vaccinations and myoclonic seizure after the 3rd dose of Pediarix vaccine.

We did not know about Vaccine Injury Court. My husband and I researched and found a lot of information supporting causality relation between seizures after pertussis-tetanus vaccine.

She has been asking my husband and I why she has a seizure if she tastes certain food as eggs, cow's milk, yeast, gluten, pork, beef, fermented food (*proteins were in vaccines that were injected into her body*).

Please review her detailed case put together by me of the best of my knowledge. It has been over 10 years of seen many doctors to help her symptoms. A determination of vaccine injury for her case will help her to deal with depression of not be able to eat many food and be a normal kid.

My husband and I have been watching her closely for the past 10 years, day and night, and we have to be one arm length next to her until we die.

She wants to know why if she was vaccine injured which resulted in having seizures. We apply to the Vaccine Injury Court because it is the only authority that can make the causality determination of her seizure disorder and vaccination.

Please feel free to contact me if you have any questions.

Thank you.
