

2020 CHILDHOOD VACCINE SCHEDULE

1962	1986	2020			
OVP	DTP (2 months)	Hep B (birth)	DTaP (6 months)	Influenza (30 months)	Influenza (11 years)
Smallpox	OVP (2 months)	Hep B (2 months)	HIB (6 months)	Influenza (42 months)	HPV (11 years)
DTP	DTP (4 months)	Rotavirus (2 months)	PCV (6 months)	DTaP (4 years)	Tdap (12 years)
	OVP (4 months)	DTaP (2 months)	IPV (6 months)	IPV (4 years)	Influenza (12 years)
	DTP (6 months)	HIB (2 months)	Influenza (6 months)	MMR (4 years)	Meningococcal (12 years)
	MMR (15 months)	PCV (2 months)	Influenza (7 months)	Varicella (4 years)	Influenza (13 years)
	DTP (18 months)	IPV (2 months)	HIB (12 months)	Influenza (5 years)	Influenza (14 years)
	OVP (18 months)	Rotavirus (4 months)	PCV (12 months)	Influenza (6 years)	Influenza (15 years)
	HIB (2 years)	DTaP (4 months)	MMR (12 months)	Influenza (7 years)	Influenza (16 years)
	DTP (4 years)	HIB (4 months)	Varicella (12 months)	Influenza (8 years)	Meningococcal (16 years)
	OVP (4 years)	PCV (4 months)	Hep A (12 months)	Influenza (9 years)	Influenza (17 years)
	Td (15 years)	IPV (4 months)	DTaP (18 months)	HPV (9 years)	Influenza (18 years)
		Hep B (6 months)	Influenza (18 months)	Influenza (10 years)	
		Rotavirus (6 months)	Hep A (18 months)	HPV (10 years)	
5 Doses	25 Doses	70 Doses			

VACCINE INGREDIENTS: Aborted Fetal Cell Lines (WI-38; MRC-5) • Aluminum • Mercury (Thimerosal) • Monosodium Glutamate (MSG) • Antibiotics Formaldehyde Squalene (MF59) • Antimicrobials • Polysorbate 20 • Polysorbate 80 • 2-phenoxyethanol • Monophosphoryl Lipid A (MPL) • CpG (synthetic DNA) Glutaraldehyde Gelatin • Formalin • Taurodeoxycholic Acid • Triton X-100 (spermicide) • Deoxycholate • Bovine Extract • Calf Serum • Sucrose • Monkey Kidney Cells Yeast Protein • Sodium Chloride • Latex • Human DNA • EDTA • milk protein • egg protein • Hydrocortisone • Phenol • Sodium Borate... **and more.**

Children's
Health Defense 

FACTS
EVERY PARENT
SHOULD KNOW...

54% of US kids have a chronic health condition. Peer-reviewed research and/or vaccine package inserts link many of these to vaccination including autoimmune diseases, food allergies, eczema, juvenile diabetes, rheumatoid arthritis, Tourette's Syndrome (tics), Attention Deficit Hyperactivity Disorder, Speech Delay, Neurodevelopmental Disorder, Autism, Sudden Infant Death Syndrome, Narcolepsy, Seizure Disorder, Epilepsy and Multiple Sclerosis.

Vaccines CAN and DO cause injury and death. And it isn't rare. A U.S. Health and Human Services (HHS) sponsored study found that vaccine injuries, when tracked using electronic medical records, are as common as 1 in 39 vaccines given. Another HHS-funded review of the Vaccine Adverse Event Reporting System concluded that "fewer than 1% of vaccine adverse events" are reported.

If your child is vaccine-injured you can't sue the vaccine manufacturer. Congress set up the National Vaccine Injury Compensation Program run by U.S. Health and Human Services (HHS). Department of Justice attorneys represent HHS against claims from families of injured children. Most injuries are turned away without a hearing; still, the program has compensated over \$4 billion, paid by consumers. Vaccine manufacturers profit and have no liability—resulting in no incentive for vaccine safety.

The vaccine safety program is a failure. The Institute of Medicine concluded that the entire CDC recommended vaccine schedule has never been tested for safety. Vaccines on the schedule have also never been tested against an inert placebo in pre-licensure testing. The unsafe, one-size-fits-all vaccine policy is hurting children.

Risk vs. benefit? All infants receive a Hepatitis B (HepB) vaccine at birth and again at 2, 4, and 6 months old. Yet, unless the mother is infected, determined by a test, the baby's risk of Hep B is essentially zero as HepB is spread by using dirty needles and having unprotected sex.

Could vaccines result in more sickness to children than the diseases they were created to prevent?
